

Feed sulphates

Content: Mg – 13,85% | Zn - 35%

Feed Grade Magnesium Sulfate - 13,85%

Description and performance

To ensure the right cation and anion balance in the cow's organism, application of **Magnesium Sulfate** is also recommended. Supplementing the dose of magnesium supplied to animals with **Magnesium Sulfate** covers animals' nutrition needs, especially during the transition period, and thus reduces the risk of post-partum fever.

Symbol	Mg - content [%]
Mg	13,85

Feed Grade Zinc Sulfate Zn - 35%

Description and performance

Zinc content in feeds, especially plant ones, is low and thus insufficient for correct development of animals. Supplementing the dose of zinc supplied to animals with **Zinc Sulfate** covers the animals' nutrition needs, ensuring their correct development.

Symbol	Zn - content [%]
Zn	35
